SLEEP IS NOT A LUXURY - BUT A NECESSITY

What is Sleep Deprivation?

Sleep deprivation occurs when a person does not get enought sleep, gets poor-quality sleep, or does not sleep at the appropriate time. The recommended sleep for adults is 6-8 hours per night

Common Causes

- Excessive phone/social media use
- Academic workload and studying
- Work-related stress or long working hours
- Excessive caffeine intake
- Stress and Anxiety
- Irregular sleep schedule
- Sleep disorders

Who are at Risk

- Students
- Night-shift workers
- Healthcare workers
- Parents of young children
- People with demanding jobs
- People with irregular schedules
- People with sleep disorders

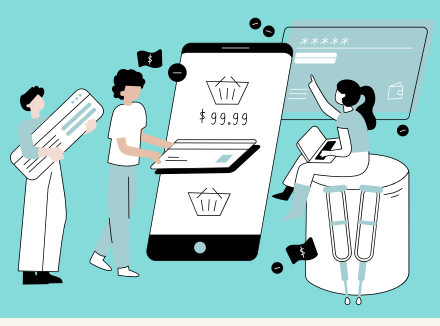

What happens when you don't Sleep?

Chronic sleep deprivation is associated with elevated cortisol and decreased testosterone levels which is known to enhance the function of GABA an serotonin levels in the brain linking it with mental and physical disorders and conditions

Warning Signs

- Excessive daytime sleepiness
- Frequent yawning
- Difficulty concentrating
- Irritability
- Forgetfulness

Solutions

- Maintain a consistent sleep and wake time
- Aim for 6-8 hours of sleep
- Limit caffeine intake at night
- Reduce screen time before bedtime

Sleep well. Think better. Live healthier
